

Surgery in the GI Tract

Companion Figures

L1 — General Surgery in the GI Tract

L2 — Surgical Management of the GI Tract

L1 — General Surgery in the GI Tract

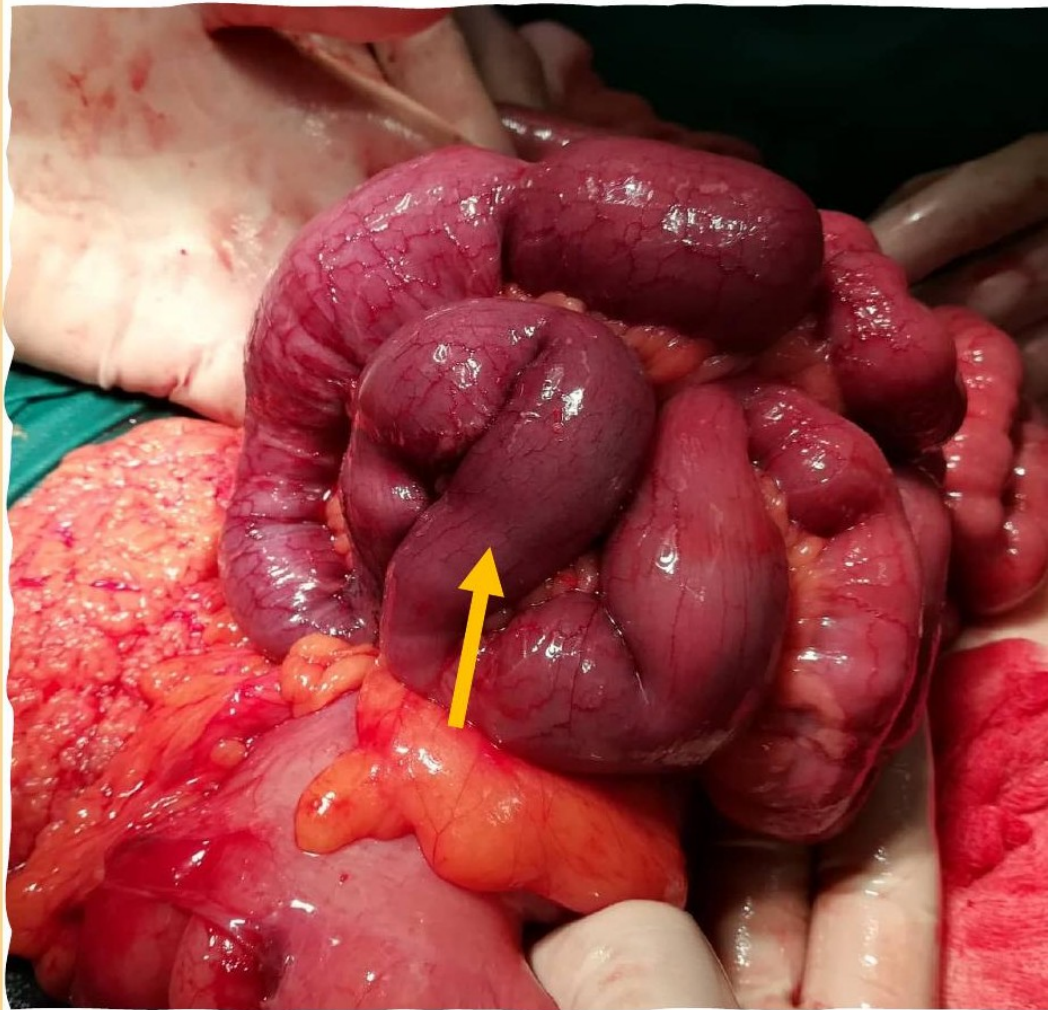

options of small and large intestine disorders

Figure L1.1 — AXR thumbprinting + CT angio with mesenteric vessel cut-off

management

lectomy

intestinal disorders

Figure L1.2 — Intraoperative ischaemic small bowel

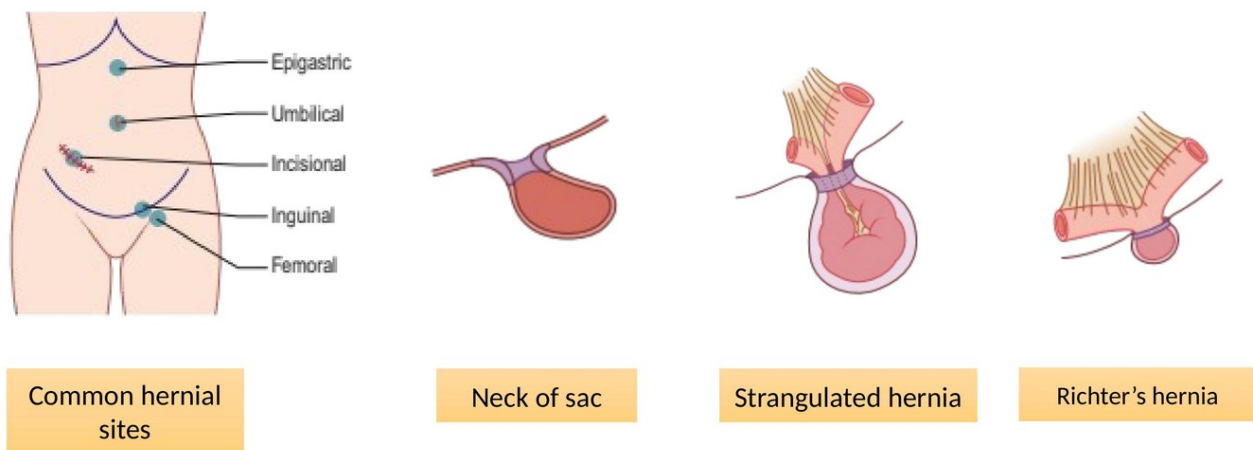

Figure L1.3 — Hernia anatomy: sites, neck of sac, strangulated, Richter's

Initial A-ray

Supine

Erect

Intestine disorders

Figure L1.4 — AXR comparison: SBO vs LBO, supine vs erect

Collapsed & dilated loops of small bowel due to transition point in the pelvis

Sigmoid stricture with proximal dilation

ions of small and large intestine disorders

Figure L1.5 — CT bowel obstruction: SBO transition point + LBO sigmoid stricture

ictures and treatment options of small and large intestine disorders

Figure L1.6 — Intraoperative transition point in bowel obstruction

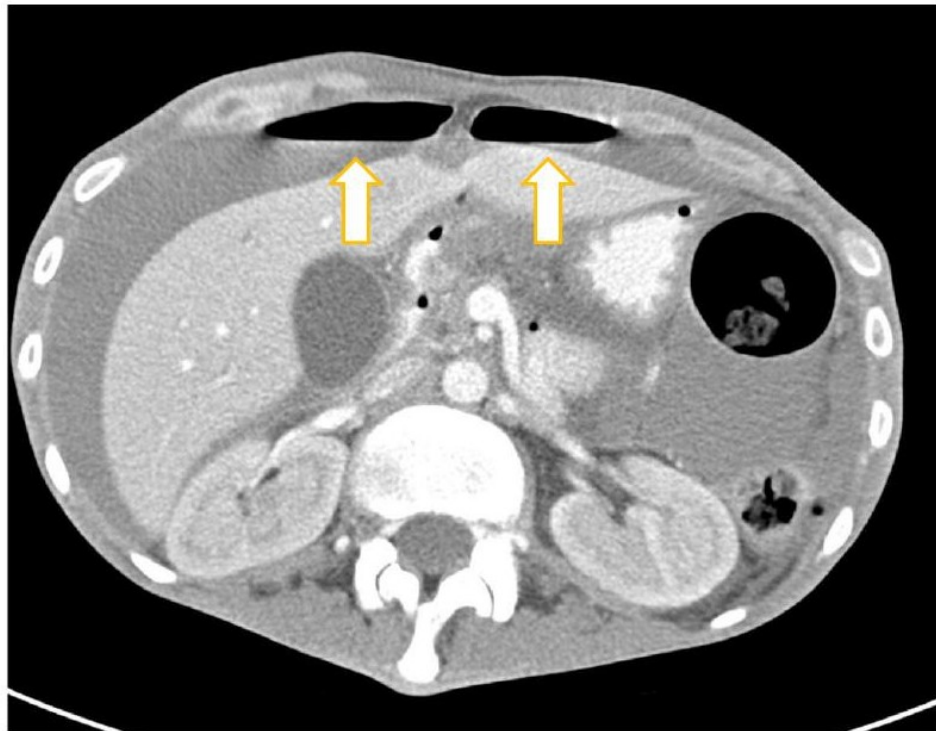

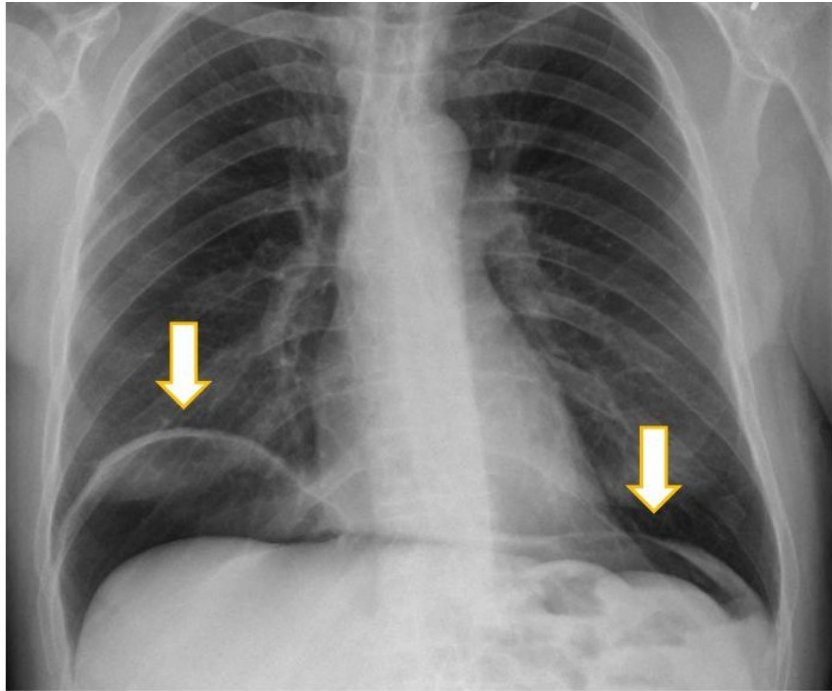

Figure L1.7 — Pneumoperitoneum: erect CXR + axial CT (yellow arrows)

S

y

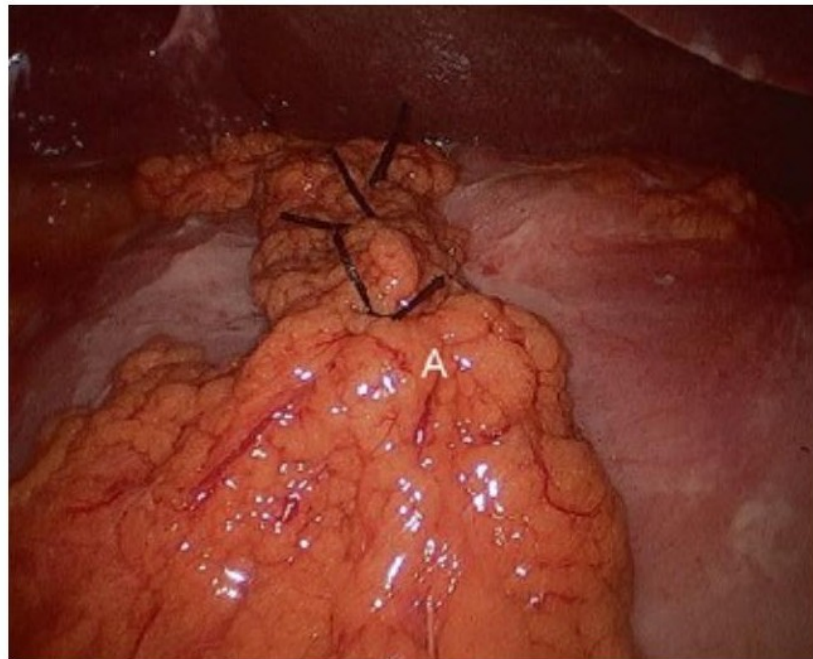

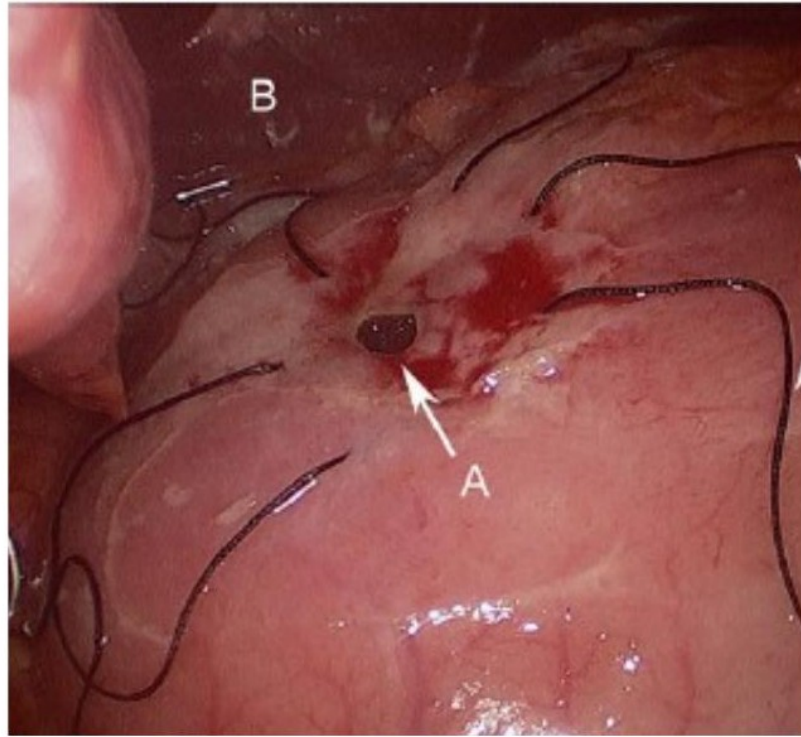

Figure L1.8 — Graham's omental patch repair: defect + repaired

L2 — Surgical Management of the GI Tract

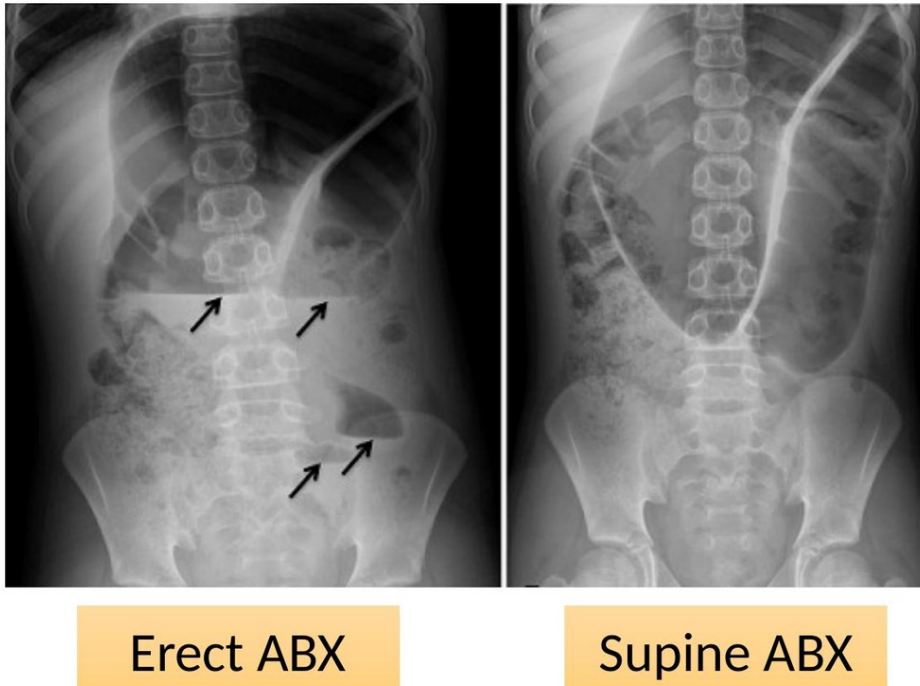

Figure L2.1 — Sigmoid volvulus AXR (erect + supine) — coffee bean sign

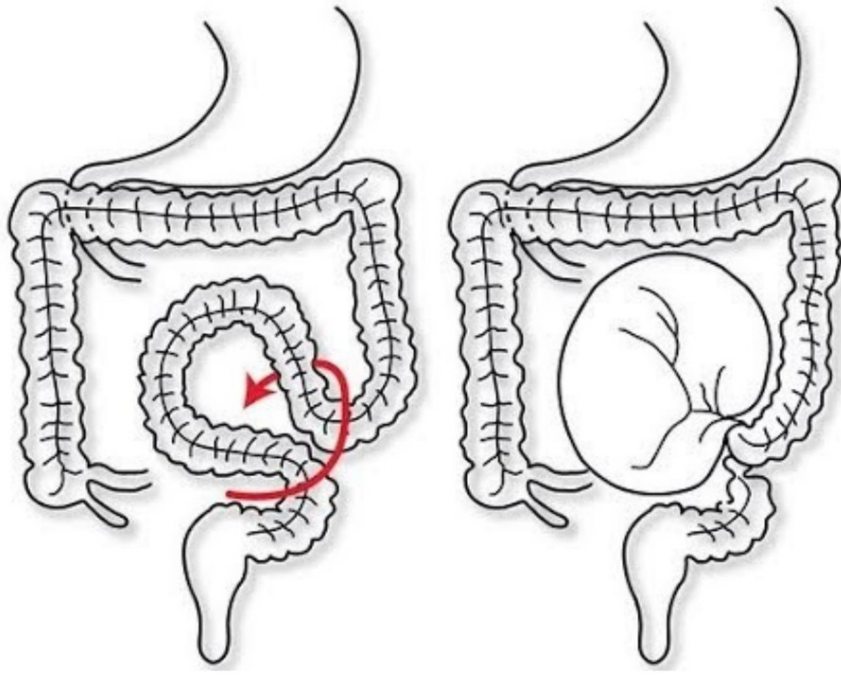

Figure L2.2 — Sigmoid volvulus mechanism diagram

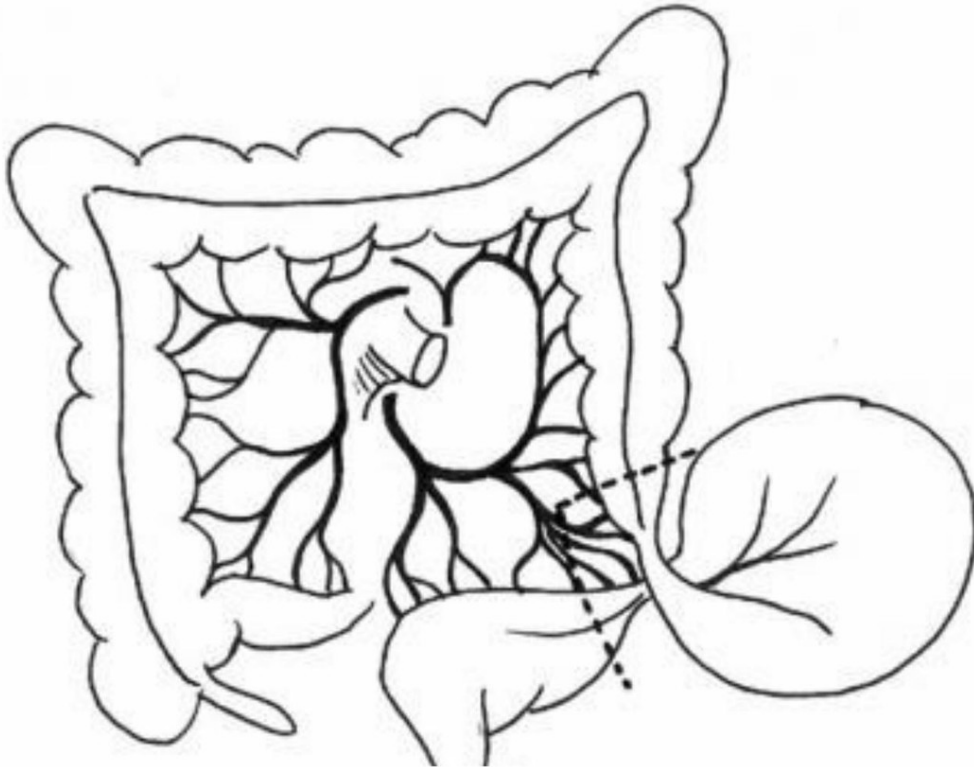

Figure L2.3 — Sigmoid colectomy resection line

(Hartmann's Procedure)

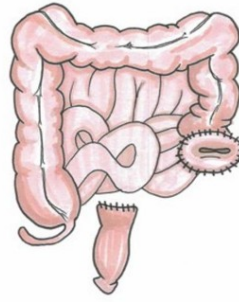

Figure L2.4 — Hartmann's procedure: gross specimen + post-op anatomy

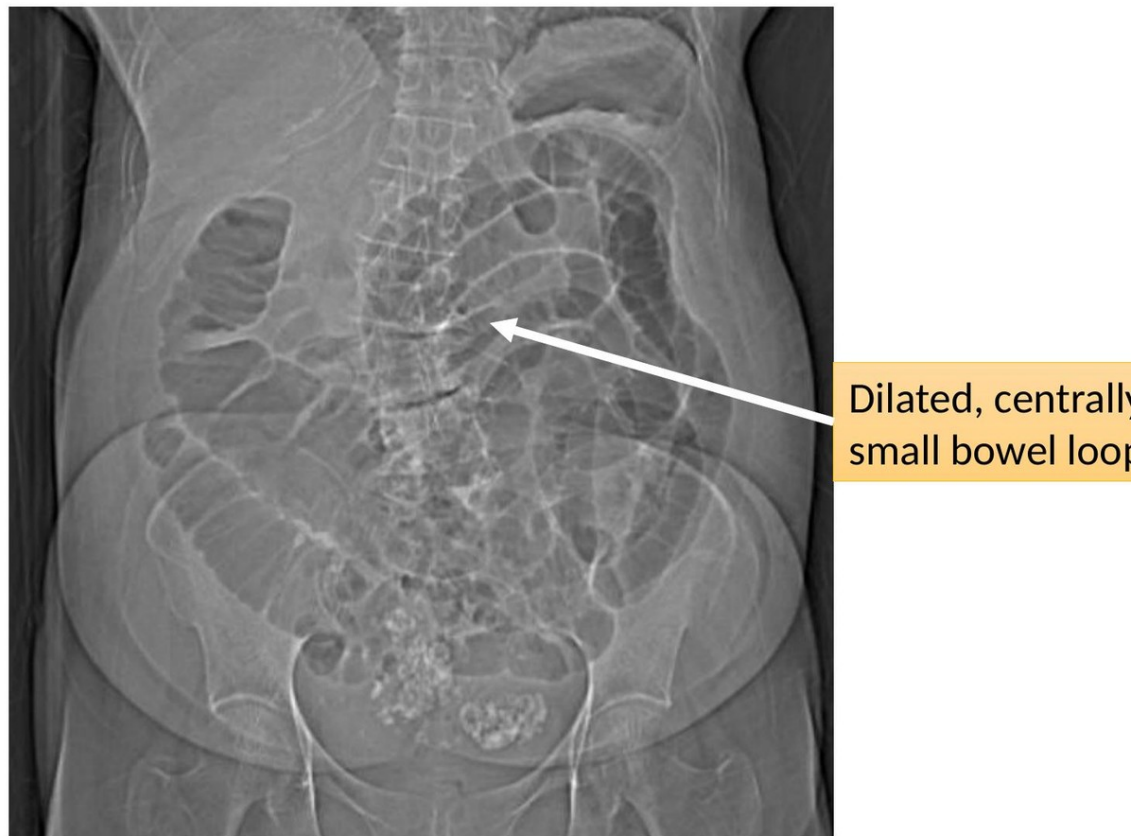

Figure L2.5 — AXR with dilated, centrally located small bowel loops in AMI

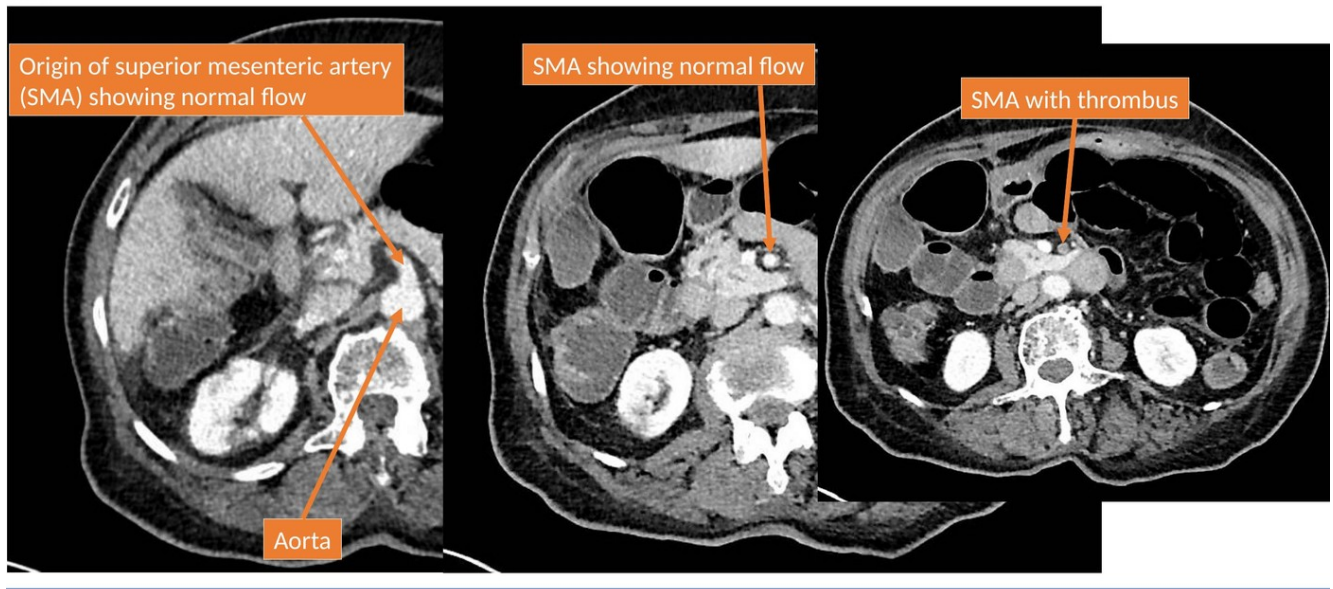

Figure L2.6 — Axial CT: following the SMA from origin to thrombus

Surgical Management of the GI Tract – Case 2

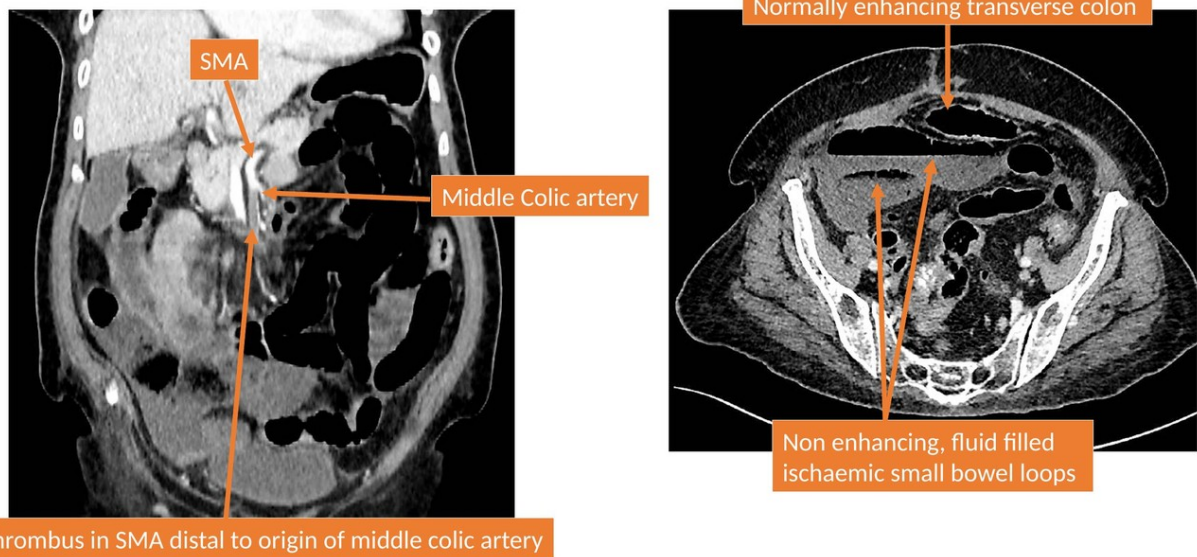

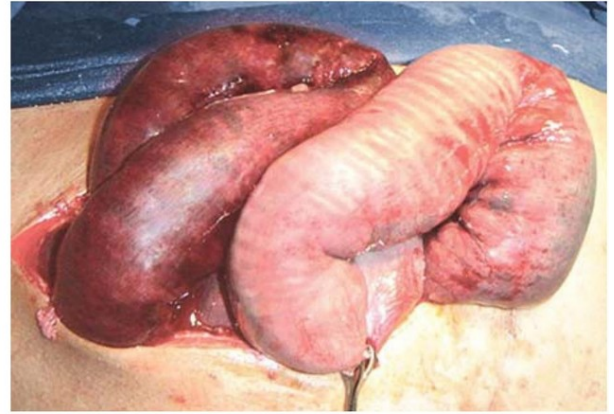

Figure L2.7 — Coronal CT (SMA thrombus distal to MCA) + axial (ischaemic SB vs perfused TC)

Extensive mesenteric ischaemia causing small bowel necrosis

Figure L2.8 — Extensive small bowel necrosis from AMI

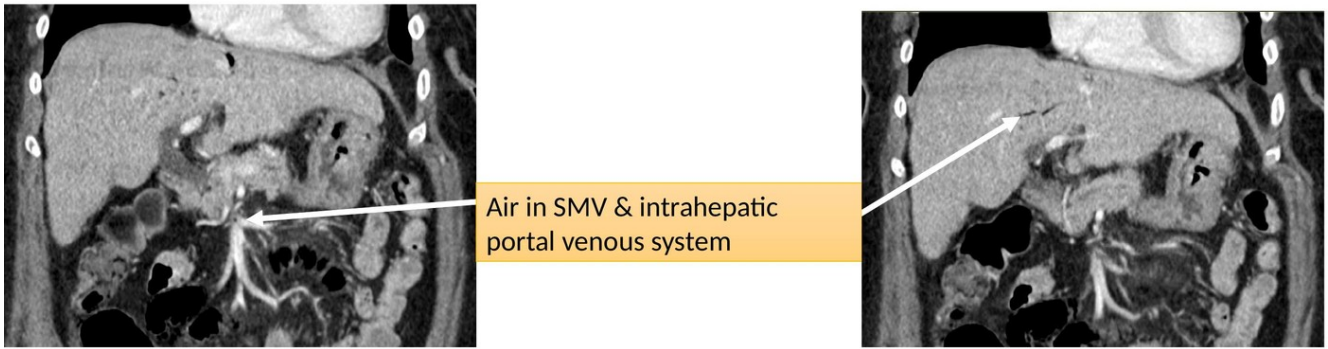

Figure L2.9 — Portal venous gas in pylephlebitis (intrahepatic + SMV)
